

# PREFABRICATED OFFICE BUILDING

[Home \(https://module-t.com/\)](https://module-t.com/) / Prefabricated Office Building

Module T offers economical **prefabricated office building** that can be set up quickly. Our prefabricated buildings are made from pre-cut panels in standard sizes of 625mm, 1250mm or 2500mm. The highly-galvanized lightweight steel structure is pre-cut in the factory. The structure's inner and outer walls are sandwich panels with a highly-galvanized, pre-painted sheet metal surface. We offer four options for inner and outer wall thicknesses: 60mm, 80mm, 100mm and 200mm.

Choose our prefabricated buildings to construct "open-plan" workspaces, meeting rooms and temporary or permanent offices.

**Prefabricated office buildings** are designed according to the client's needs. You can choose the interior layout, finishings (floor coverings, doors and windows) and type of exterior cladding.

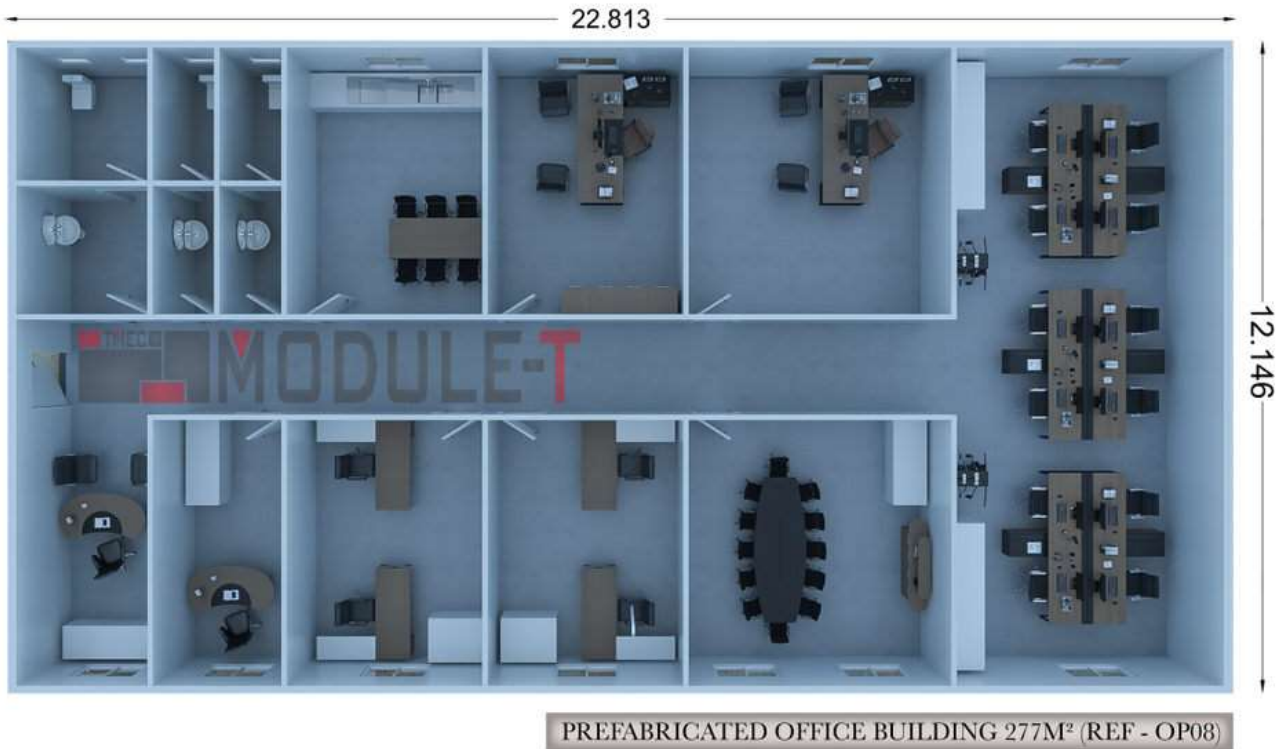

Before production begins, we perform all the necessary calculations to comply with current seismic and anti-cyclonic standards.
